ASCENDA ENTERPRISE CAPITAL LLC

AECQS Controlled: Hypothetical Results Summary

STATUS: ACTIVE RESEARCH & DEVELOPMENT. Updated 25 October 2026. Figures are hypothetical, are revised as research continues, and will change.

Hypothetical backtest, September 2012 – September 2026, net of modeled costs. Central case (median of four walk-forward settings): $1.19B ending value from a modeled $25M start (about 32% CAGR), worst of four settings $1.0B, drawdown limit 16%. Costs grow with account size: market impact is re-charged each day on the current account value. Not audited. No live or paper track record exists. Not an offer or solicitation.

Ending value by starting capital

Start	Ending value (costs grow with account size)	CAGR	Worst of 4 settings	Max closed-day DD
$1M	$177M	46%	$137M	within -16%
$10M	$717M	36%	$614M	within -16%
$25M	$1.19B	32%	$1.00B	within -16%
$100M	$2.14B	25%	$1.71B	within -16%
$500M	$3.95B	16%	$3.31B	within -16%
$1B	$5.34B	13%	$4.60B	within -16%

CAGR is computed over 13.74 years (252-day years). An earlier version of this summary included a volatility-based de-risking overlay; it was removed after its input data was found to be an inverse-volatility product price rather than the VIX index, and all figures were rebuilt without it.

Payout figures

Constant-capital payout figures are being re-run on the rebuilt configuration. Previously published payout figures have been withdrawn and should not be relied on.

What the configuration contains

A multi-strategy futures bundle reduced to the components that remain profitable at size; an NQ opening-drive sleeve; a short-horizon livestock sleeve; and a 16% closed-day drawdown limit. No volatility overlay. Settings are selected on prior data only (anchored walk-forward); the reduced component set and sizing were chosen on the same history, and many variants were tried.

Limitations

Costs are modeled, not measured from live fills. Capacity, margin, market impact and intraday liquidation feasibility are not verified; the equity universe carries survivorship-bias risk. In a first-half/second-half check, second-half drawdowns exceeded the 16% limit. Actual results would differ and could involve total loss.

HYPOTHETICAL PERFORMANCE — NOT ACTUAL TRADING. Simulated backtest results, net of modeled costs, prepared with the benefit of hindsight; not audited; not investor returns or assets under management. No representation is made that any account will or is likely to achieve similar results. Nothing herein is an offer or solicitation. Contact: izaiah@ascendaenterprisecapital.com
