Who We Are

Ascenda Enterprise Capital LLC is a multi-strategy investment firm registered in the State of Georgia, founded and operated by Izaiah Cottle. AEC operates across three core verticals: global markets trading, real estate, and private equity.

Built from the ground up without institutional backing, AEC has generated \$81,229,509 in documented net returns with a 78% win rate across 32,000+ trades — powered by a proprietary Quantum Trading System developed entirely in-house.

AEC is not a traditional fund. We are built around performance, precision, and a long-horizon vision to become the most dominant investment firm in the world.

01 Global Markets Trading	Active and systematic trading across NAS100, ES Futures, Gold, Crude Oil, and top equities. Powered by AEC's proprietary Quantum Trading System.
02 Real Estate	Value-add and opportunistic acquisitions across residential and commercial sectors. Active operator approach with hands-on asset management.
03 Private Equity	High-conviction equity stakes in operating companies. We partner with founders who share a long-horizon vision and bring capital, network, and operational depth.

The AEC Method

Three proprietary frameworks operating in concert — engineered to identify high-probability entries, eliminate noise, and execute with institutional precision across global markets.

LAYER I — Momentum Engine

ADVANCED MOMENTUM ANALYSIS

- Multi-timeframe momentum identification
- Institutional order flow direction confirmation
- Three-timeframe trend alignment required
- Entry only in direction of dominant flow
- Eliminates counter-trend trades entirely

LAYER II — Z-Score Standard Deviation

STATISTICAL EDGE FRAMEWORK

- Proprietary Z-score price deviation analysis
- Identifies statistically extended price levels
- Mathematical mean reversion identification
- Eliminates emotional decision-making
- Defined statistical edge on every trade

LAYER III — DOM & Order Flow

INSTITUTIONAL FLOW ANALYSIS

- Depth of Market microstructure reading
- Institutional entry and exit identification
- Real-time tape reading at tick level
- Order flow imbalance detection
- Pinpoints precise institutional moments
